In the Face of Threat. Analysis of the Factors of Group Cohesion in the School Textbooks of the Soviet Union Period

Maria A. Kozlova

On the basis of analysis of content of textbooks for primary schools and teaching aids for teachers of science we considered broadcast value orientations and models of behavior in relation to the members of out-group, and their transformation during the first half of the XX Century. The following trend was found: attitudes of the in-group favoritism were broadcasted to the schoolchildren during the discussion of the ecological phenomenon slightly less active than in the textbooks of reading. The purpose of such an influence is obvious: in-group differentiation leads to the increasing of group cohesion, combined with the refusing of out-group members from communication.

Keywords: elementary school, education of the Soviet Union period, values,

in-group favoritism, intergroup attitudes, moral orientation.

Systemic-Activity Approach Under Conditions of Inculcation of the State Educational Standards

Lyubov P. Kochneva

The article is devoted to the change of the general paradigm of education in connection with the new standard adoption of school education. The systemic-activity approach to the education and development of schoolchildren lies at the heart of the standard. The author notes that this approach reflects, for instance, the transition from isolated study of scientific notions of pupils to the inclusion in the content of education in the context of solving life's problems as well as transition from individual forms of training to recognition of the decisive role of cooperation in the achievement of training objectives. **Keywords:** systemic-activity approach in education, classic and new paradigm of education, problem-oriented analysis, new activity system, principles of educational initiative, retraining of teachers and school administration.
